Summary

description	<p>English: Figure 6 Mid-Westphalian A to top Westphalian B: comparisons between the western and eastern sides of the Pennine Basin using cross-plot correlation (see text). Note that the scale is presentational only, derived from detailed work. The vertical axis is depth to key horizons from a structurally undisturbed borehole in a typical part of the eastern Pennine Basin, and the horizontal axis (same scale) is depth to the same horizons (using inter-basin correlation; see text) in various coalfields of the western Pennine Basin. The western and eastern parts of the Pennine Basin would have been in depositional continuity during Westphalian times, with a similar syn-depositional tectonic setting.</p> <p>From: Carboniferous hydrocarbon resources: the southern North Sea and surrounding onshore areas, edited by J. D. Collinson, D. J. Evans, D. W. Holliday, N. S. Jones. Published as volume 7 in the Occasional Publications series of the Yorkshire Geological Society, Copyright Yorkshire Geological Society 2005.</p>
