Informal name	UKOOA group name	UKOOA formation/member name		Comments	Objections
Barren Red	Coneybeare	Schooner	Ketch	Redbeds divided into two members (Upper Ketch = Westphalian D; Lower Ketch = ?U. Westphalian C). Schooner Fm includes sandstone-bearing Coal Measures from mid-Westphalian B upwards and all overlying redbeds.	<ul style="list-style-type: none"> <li>• Angular unconformities present at base of and possibly within redbeds (i.e. within Schooner Formation).</li> <li>• No adequate name for sand-bearing unit of Coal Measures below base Ketch unconformity.</li> <li>• Schooner Formation contains units having major differences in mineralogy, provenance and inferred tectono-stratigraphical setting.</li> </ul>
			Upper		
		Lower			
Coal Measures		Un-named			
		Westoe Coal		Coal-dominated sand-poor succession between top of Caister–Murdoch Sands (lower Westphalian B) and base of mid-/upper Westphalian B sand-bearing succession.	Formation marks useful subdivision in reservoir geology terms. Name inappropriate as coal not dominant lithology.
		Caister Coal		Sandstone-dominated succession between top Namurian and top of Caister–Murdoch Sands. Base requires biostratigraphical calibration.	Formation marks useful subdivision in reservoir geology terms. Name inappropriate as coal not dominant lithology.
