H.W. Haywood - introduction

A collection of photographs depicting cave exploration and related activities in the Yorkshire Dales area by the Leeds Cave Club in the early 1930s and taken by Harold Wadsworth Haywood FRPS was donated to the Geological Survey of Great Britain Library by Miss Haywood in 1935. The collection consists of two large albums containing a total of 460 separate photographs. There are also twenty-six pages of typescript notes, a bibliography and nine pages of hand-drawn maps and sections illustrating the Alum Pot area and its caves, all produced by Eli Simpson.

The dates of the photographs range from 1928-1934. The images cover the Yorkshire Dales and adjacent areas of Lancashire and Westmorland in the west. They include surface photographs of the caves and karst features, many spectacular underground shots of the caves and their formations, and pictures of members of the Leeds Cave Club, exploring the caves and carrying out a variety of other activities on the surface.

The collection consists of two large albums which can be viewed from the following links:
