Finlayson, A G. 2014. Model metadata report for the Great Glen — Moray Firth merged Rockhead Elevation Model. *British Geological Survey Internal Report*, OR/14/060.

As with all geological models that use borehole information, the model assumes that the interpretation in the original logs is correct, and that the depths and start elevations were accurately recorded. The spatial extent of superficial deposits in the model is based on information in the 1:625 000 scale Superficial Geology map.
